January 1977 through October 1980

112 Citations

Prepared by Estelle J. Abrams

This bibliography includes references to the training of health personnel and lay persons in the accepted technics of cardiopulmonary resuscitation (CPR), the importance of CPR in the management of cardiac arrest, complications, and some experimental studies in which technics are examined for improving and understanding the mechanics of CPR. The appendix contains citations from CATLINE and November 1980 MEDLINE.

best copy available

This bibliography contains references to recent articles selected from some 3,000 English and foreign language journals and a limited number of monographs. Articles from these journals and monographs are indexed for inclusion in *Index Medicus* and other bibliographies produced by the National Library of Medicine. The references in this Literature Search were retrieved from NLM's MEDLINE data base; the dates above show the period during which the references were added to MEDLINE.

Each citation is listed with the descriptors selected from NLM's list of Medical Subject Headings (MeSH) under which the article was indexed. MeSH descriptors of most significance in an article are identified with an asterisk. The article cited will be found in *Index Medicus* only under these starred descriptors.

A bracketed title indicates the article is in a foreign language. For foreign language articles the designation ENG.ABSTR. follows the publication date if the article includes an English abstract; language abbreviation in parenthesis follows.

A full explanation of the elements included in each citation, as well as a complete list of current NLM Literature Searches are included in *Index Medicus and Abridged Index Medicus*. To obtain a current list of Literature Search titles, write: Literature Search Program, Reference Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, Maryland 20209. Please include your name and address typed on a gummed label (no return postage necessary).
